

Release Notes:

The following list of enhancements reflects changes that were made available to PBMA Secure Work Groups users as of April 4, 2005.

Major Enhancements

Site Wide Search

Users are now permitted to search for content across all their Work groups (i.e. Work Groups shown in a user's "My Communities" listing). A simple keyword search form will appear below the "My Account" section on the site main page after being logged in. A link to an advanced search will open a familiar pop-up search window (nearly identical to the current community search interface). Site-wide search as a feature can be disabled via the Site Administration area if it is not desired. Both community and site-wide search will now include folder searches and be more performing due to a new content indexing system.

Custom Logout Destination

Work Group founders can specify their own custom logout destination (i.e. a custom destination per Work Group).

Main Page Work Group Graphic

Work Group founders can now better control the graphical logo used to represent the Work Group. Currently, one logo graphic can be uploaded to appear in both the upper-left corner of the Work Group and in all Work Group listings. These logos can now be defined separately.

Chat "What's New Page" option

Work Group Founders are now permitted to show a list of available chat rooms on the What's New page. This can be enabled by adding a positive quantity to the Chat tool in the "What's New Configuration" form.

Minor Enhancements

Invitation, Discussions

Community emails sent "from" an individual user are now sent from site's configured "bounce" email address with the user's name. The user's name and actual e-mail address are now located in the REPLY-TO property thus ensuring replies still reach the intended user. This change was required to prevent "hidden" e-mail rejections due to modern email server spoofing rules.

Folders

Improved performance in communities with tools with over 1000 folders.

Chat

Added printer friendly views of Chat Rooms and Chat Transcripts.

Member List

Fixed membership caching issue for newly created accounts.

Calendar Reminders

Improved support for user's preferred time zones in calendar reminder notifications.

Highlights

Fixed issue preventing Highlights from appearing above a folder accessed directly via a GoURL.

Highlights

Fixed issue that caused Highlights to not load on the What's New page in certain circumstances.

Site > Community > Highlights > Comments

Fixed issue caused by browser URL character limits that prevented some Highlight comments from being updatable.

Chat

Fixed issue that ensures sites have correct permissions set for chat tool.

Join Process

Added ability to pass invitation key to join page after agreeing to Terms of Service.

Discussions

Fixed validation issue of permissions at tool level in the discussion tool.

Discussions

Fixed issue causing a repeat of topic message being sent during the subscription process in discussion branches of a certain length.

Polls

Fixed date issue to ensure polls ending on the 31st day of month displays correct start/end dates.

Invitation Tracking

Fixed sorting of the "Invitor" column in the Invitation Tracking interface.

Community Administration

Fixed JavaScript error on custom graphic preview page.

Site > Single Sign On (SSO)

Improved error handling for single sign-on "userid" verifications.

Site > Single Sign On (SSO)

Improved batch update validation process for site verifications.
